

Feeding and Drinking Systems

Lowest feed cost per dozen eggs of any automated system. Feed savings for a 100,000-bird building can equal nearly 100 tons of feed per year.

ULTRAFLO® Cage Feeding System

Chore-Time offers two reliable ways to feed caged birds: Chore-Time's ULTRAFLO® Feeder, preferred by an overwhelming majority of the United States' top egg producers, and Chore-Time's Traveling Hopper Feeder. Either system gives you reliable performance year after year and helps birds perform at their peak.

ULTRAFLO® FEEDER

- Dependable micro-processor control.
- Energy-efficient system uses sturdy, long-lasting parts.
- Unique auger connector joins ends of one-piece coreless auger.
- Low maintenance costs.
- Uniform feed distribution through closed-loop system delivers precise

feed ration without risk of over-feeding the birds.

- Auger helps prevent birds from raking and wasting feed.
- Slight rotation of auger remixes all feed in the trough.
- No trough "edges" where stale or damp feed can accumulate.
- Independent tests show no feed separation or high-grading of feed.
- Programmable "stimulation" cycles stir feed to stimulate birds' appetites.
- Reduces feed usage as much as 5% while increasing production.

Traveling Hopper Feeder

TRAVELING HOPPER

- Simple design features few moving parts, corrosion-resistant PVC-coated cable and permanently sealed wheel bearings for reliability.
- Adaptable to multi-tier vertical pullet or layer cage systems, with or without walkways.
- Takes up less aisle space than similar feeders.
- Uses as little as 1/2 HP motor to feed an entire cage row. Soft start feature reduces strain on power unit.
- Feeder includes enough hopper capacity to feed in both directions of travel and is easy to operate manually in areas with unreliable power.
- Feed level is adjustable, and feeder includes both

- individual tier shut-offs and fill system shut-offs to prevent spillage.
- Hopper view windows provide feed level visibility and permit easy confirmation of proper filling of hopper.
- Feed "pushers" at each tier reduce feed wastage while keeping feed in front of birds; a feed level "sled" reduces caked feed.
- Support system from cage legs helps align feeder with the cage row, minimizing the possibility of derailment.
- A rotational sensor monitors whether feeder is running and serves as a safety shutoff for the power unit.
- System design does not require placement of power units in cages, unlike some other systems.
- Can feed entire cage row or house at once for reduced bird stress.

A Popular Drinking System

NIPPLE SYSTEM FEATURES

- Automatic flush capability also facilitates stimulating birds with fresh water in hot weather.
- Designed of corrosion-resistant materials with UV inhibitors for long-lasting service.
- Higher volume regulator and large unrestricted pipe for adequate supply in longer lines.
- Completely enclosed system uses pre-assembled pipe assemblies, including valves, that are ready to install.
- Saddle design provides a water-tight connection to the pipe without gluing or welding.
- 360° trigger action provides easy access for all hens.
- Optional drip trough and catch cups available.

The Best Way To Manage Your Farm's Feed Supply

Chore-Time's ALL-OUT® Feed Management System includes the latest technology in feed storage and handling. With added biosecurity, convenience, and efficiency features, Chore-Time's ALL-OUT System is more than a feed bin. It is a system which produces feed savings and higher bird productivity.

ALL-OUT® SYSTEM FEATURES

- 40° roof allows bin to be filled completely.
- HYDRO-SHIELD® Weather Guard prevents moisture from running into bin boot.
- Optional ACCESS PLUS® Hopper Access Door (patented) eases interior bin cleaning chores through a ground-level, resealable door.
- SPRING-LOCK® Feed Bin Lid and Opener (patented) stays right-side-up when open; can be operated from the bin or a remote location.
- Optional SHAKER-PLATE® Material Flow control (patented) helps achieve dependable flow of feed.
- Optional Ladder Security Door restricts unauthorized access to the ladder.
- Famous FLEX-AUGER® Feed Conveying System uses a coreless, spring-steel auger to convey feed.
- Chore-Time Feed Screener removes foreign objects and clumps of bad feed.
- Digital feed bin scale system provides accurate inventory of stored feed using temperature-compensated load cells.
- Scale system includes LCD display, power failure protection, and computer or printer connection.
